STATE MENTAL HOSPITALS: 1979

The downward trend in the number of State mental hospital patients continued during the year as 10,796 patients were listed on the books on June 30, 1979. These 10,796 patients represent a decrease of 43,523 from the peak of 54,319 in 1966.

Of the 10,796 patients listed on the books on June 30, 1979, 10,435 were in residence and 361 were on leave of absence. Compared to June 30, 1978, there was a total decrease of 283 patients on books (Table 1), however, it must be kept in mind that the rate of decrease has slowed dramatically in the past few years.

Female patients continue to outnumber males and, at the end of the fiscal year, they accounted for 51% of the resident patients: 49% of those on leave and 51% of all patients on books (Table 2).

Psychotic disorders (predominantly schizophrenic reactions) continued to be the prevailing diagnoses of resident patients, with 64% of the year-end residents suffering from such disorders. As in recent years, the majority (58%) of resident patients were afflicted with schizophrenic reactions (Table 3).

At the end of the fiscal year, the prevailing mental disorders of the resident population were similar to those at the beginning of the year, with schizophrenic reactions increasing one percent (to 58%). Patients suffering from manic depressive reactions and from other psychotic disorders remained at 6% and schizophrenic patients continued to account for much of the movement during the year; comprising 57% of all admissions, 66% of transfers in and 69% of transfers out among the hospitals in the State system. The percentage of alcoholics admitted during the fiscal year remained at 4%. Schizophrenic reaction was the predominant mental disorder of deaths in hospitals at 35% (Table 4).

The percentage distribution of residents by age group varied slightly from the first to the last day of the fiscal year. For the first time in five years, patients 45 years of age and older accounted for less than 75% of the resident population at the end of the year. On the other hand, patients under 45 years of age continued to account for the majority of the year's movement of residents (except for deaths in the hospitals) by accounting for 73% of the admissions and discharges and 59% of the transfers in and out. There has been an increase in the deaths in hospitals of patients 65 years of age or older from 71% in 1974 to 72% in 1977, 71% in 1978 and now, 73% in 1979 (Table 5).

The dominant mental disorder of resident patients in all age groups (except under 15 years) were psychotic disorders (predominantly schizophrenic reactions). Other frequent diagnoses were transient situational disturbances for those patients under 25 years of age and organic brain syndromes for patients 65 years of age and older. These trends are similar to recent years (see Table 6).

The time-on-books in the hospital since last admission was under three years for 32% of the year-end residents, 3 to 10 years for 17%, 10 to 20 years for 11% and 20 years or more for 40%. By age group, the largest percent of both male and female residents under 45 years of age had been on the books for 1 to 3 years, and each group 45 years of age and

older for 20 years or longer. It is interesting to note that over half (51%) of all patients have been on the books for 10 or more years and that 40% have been on the books for 20 years or more. Of this latter group, over 81% were 55 years of age or older (Table 7).

For the state as a whole, there were 92 patients on books per 100,000 population as of June 30, 1979. The number per 100,000 by county of residence ranged from 8 for Fulton County to 173 for Schuylkill county. As was to be expected, Philadelphia and Allegheny Counties had the largest number of patients, with 1,608 and 1,945 respectively. However, these two counties' differences are accentuated when the comparison is on a per 100,000 population base, i.e., Philadelphia having a rate of 91 patients per 100,000 population and Allegheny county having 132 patients per 100,000 population (See Table 9). With respect to total admissions, there were 61 admissions per 100,000 population. The admissions per 100,000 by county (population) ranged from a low of 8 for Fulton county to 139 for Delaware County (the next highest being 116 from Somerset county) (Table 11).

Of the 7,225 admissions during the fiscal year, 2,520 were voluntary commitments (35%), 2,376 were court commitments (33%), and 2,306 were emergency commitments (32%). Unlike previous years, voluntary commitments were not the predominant type of commitment in a majority of hospitals except Retreat, Torrance, Wernersville and EPPI (Table 12).

Most resident patients as of June 30, 1979, were on the books of the State hospital nearest their home counties, with the exception of Farview which, because of its specialized nature, drew patients from throughout the State (Table 16A).

1/ State fiscal year ending data changed from May 31 to June 30 beginning in 1962.

2/ Haverford State Hospital opened in 1962, Eastern State School and Hospital in 1963 and the emotionally disturbed unit of Western State School and Hospital in 1965.

3/ Includes a few patients from hospital but not on formal placement.

Data not tabulated since county
of residence does not represent the
county to which the patient was discharged
but rather the county of admission.
